AmiCell® SMS GATEWAY

DEVELOPERS

AmiCell®

SMS

HOW IT WORKS

MicroTeq hosts a fast Internet SMS Gateway or Wireless Access Point to enable software developers to integrate business systems or websites with SMS functionality.

To keep the integration of SMS requests simple and secure with the least redundancy, Secure FTP file transfers, URL Posts and Email 2 SMS can be used between the 3rd party system or website and the AmiCell® SMS Access Point.

The FTP interface method between the APN and the 3rd party system or website is achieved via the transmission of SMS information using data push and pull. SMS requests for delivery will be via push (upload) and delivery, error and reply reports via pull (download). This method is recommended for high volumes of SMS requests.

The URL post method is a script residing on the APN and is called with specified parameters from a remote location. IP address lookups are mandatory! This method is ideal for single SMS message delivery.

Email 2 SMS request can be initiated via a single SMS in the email body, a text file, or a spread sheet in a specified format and can be delivered via Email to the APN for processing.

To obtain technical integration information please contact us via email.
