

AmiCell® SMS SERVER

AmiCell® SMS

HOW IT WORKS

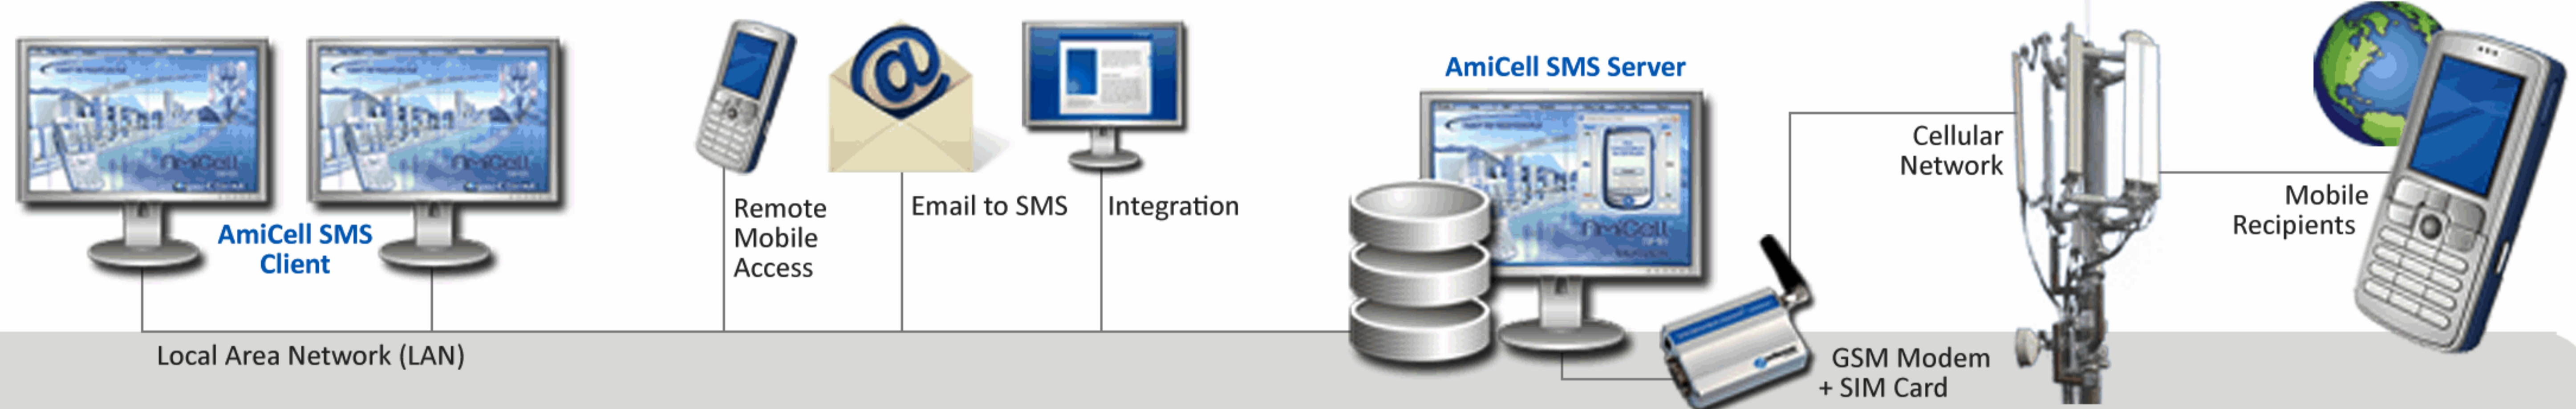

The AmiCell® SMS Server software requires a dedicated GSM Modem with SIM Card and can be installed on any desktop computer, laptop or dedicated server running Microsoft Windows operating systems. The AmiCell® SMS Client software can be installed on desktop computers connected on the same LAN (Local Area Network) to enable multi-user access to the AmiCell® SMS Server and requires no hardware. All data is stored centrally in the AmiCell® SMS Server database.

A GSM modem connected to the computer sends and receives SMS messages. Thus no Internet connection is required and the SMS messaging is completely wireless! Every AmiCell® SMS Server comes with its own GSM modem and SIM card, with its own, dedicated and unique 10-digit cellular number. You host and manage the system on your own IT infrastructure.

The AmiCell® SMS Server has a wide variety of features, which makes it one of the World's most complete and professional SMS messaging tools used by a large and diverse customer base internationally. It not only just sends and receives SMS messages, the AmiCell® SMS Server is an excellent two-way communication solution for any business. With full 3rd Party Software Integration capabilities, remote access from mobile phone or email, exceptional data handling and much more, this software has proudly been dubbed "the ultimate SMS solution" and is trusted by many for its reliability and stability.

Small, large, and corporate entities in any industry, can benefit from the AmiCell® SMS Server's functionality not only to save cost but to increase customer relations, productivity and effective communication.

The AmiCell® SMS Server and Client can be deployed locally and internationally on any digital cellular network. SMS Messages can be sent and replies can be received from any cellular network.
